

THE SUNNY BOY 5.0-US/6.0-US SOLAR INVERTER KEEPS THE POWER ON WHEN THE GRID IS DOWN.

Natural disasters, wind, lightning and extreme heat can all lead to power loss, even if you have a solar system, but the Sunny Boy 5.0-US/6.0-US solar inverter with Secure Power Supply offers 2,000 watts of power when the grid is down and the sun is up, keeping your electronics and small appliances humming.

- » High efficiency means the Sunny Boy delivers a higher energy yield as power is converted from the solar panels into usable energy for your home.
- » SMA's proprietary shade management technology, OptiTrac™, ensures that areas of shade have minimal impact on your system's performance.
- » A wide temperature range ensures your system will begin producing earlier in the morning and continue producing later in the day even in extreme heat and cold.

Call today to learn more about the new Sunny Boy-US with Secure Power Supply.
